- **Operating frequency:** 433 MHz
- **Remote control range:** approximately 30 m in an open area and approximately 10 m in environments with partitions

Receiver

Pairing button

1. Pairing the Remote Controller

a. Switch on the light.
b. Press the code pairing button on the receiver.
c. Immediately press one of the A, B, C, or D buttons on the remote controller.
d. If the indicator on the receiver flashes once, press the same button on the remote controller again.

The pairing process is now successfully completed.

2. Clearing the Pairing (Code Deletion)

a. Switch off the light and wait until the indicator on the receiver turns off.
b. Switch the power on again, then press and hold the button on the receiver for 5 seconds.
c. When the indicator flashes three times, the code has been successfully cleared.

All previously paired remote controllers will be removed from the receiver's memory.

3. Using the Remote Controller

a. Open the battery compartment of the remote controller and insert a 12 V (23A) battery.
Make sure to observe the correct polarity (+ / −).
b. Use the A / B / C / D buttons to switch the corresponding device on or off.
c. When the battery voltage is low, replace the battery in time to ensure proper operation of the remote controller.
